Internal and Non-Destructive Examination of Wire Ropes

Product information

At Traction Levage, we provide magnetic rope testing of your wire ropes. This procedure detects external and internal broken wires, deformations and corrosion on ferromagnetic wire ropes.

The advantage of this control is that it is non-destructive because it uses the magnetic properties of the wire ropes. This process is therefore contactless.

Our qualified technical experts in cable kinematics studies and certified Cofrend2 in magnetic rope testing will be at your disposal to present and study with you the most appropriate solution for your context of use/ business sector.

Would you like to carry out a magneto-inductive inspection? Then ask our teams for a quote via our website
