

RSB System

Product information

The RSB system consists of a pulley, a wire mesh sling, a tie and a hook. It offers a safety factor of 4. Unlike other products, the mesh sling is made of riveted chain links and not welded, thus avoiding the need to replace the entire sling when damaged.

The RBS system is very flexible and adapts perfectly to different forms of load. This system is robust and slash-resistant. Ideal for handling coils, it eliminates tipping issues and does not damage coils. A protective PVC sheath may be added on request.

The RSB system comes with an EC declaration and is readily available. It has legible marking and an individual traceability code.

Machinery Directive 2006/42/CE
